B.E. ELECTRONICS AND COMMUNICATION ENGINEERING

I VISION OF THE DEPARTMENT

- To initiate high quality technical education and to nurture young minds towards creative thinking that inspires them to undertake innovations in the field of Electronics and Communication Engineering (ECE) and be competent in the global arena.

II MISSION OF THE DEPARTMENT

- To constantly upgrade engineering pedagogy that caters to the growing challenges of the Industries.
- To develop conceptual learning that leads towards critical and innovative thinking.
- To establish good harmony with industry that fills the gap between academia and the real world by enabling the students to prepare for the diverse and competitive career paths.
- To endorse higher studies and pursue research in the ECE discipline with sensitivity towards societal requirements.

III PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: To pursue research or have a successful career in academia or industries associated with Electronics and Communication Engineering, or as entrepreneurs.

PEO2: To provide strong foundational concepts and advanced techniques and tools in order to enable them to build solutions or systems of varying complexities.

PEO3: To prepare the students to critically analyse the existing literature in the area of specialization and ethically develop innovative and research-oriented methodologies to solve the identified problems.

IV PROGRAM OUTCOMES (POs)

1. **Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem Analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and Sustainability:** understand the impact of the professional Engineering solutions in societal and environmental contexts, demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics, responsibilities, and norms of the engineering practice.
9. **Individual and teamwork:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-Long Learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

V PROGRAM SPECIFIC OUTCOMES (PSOs)

The students will be able to

- Analyze, design and develop solutions by applying foundational concepts of electronics and communication engineering.
- Apply design principles and best practices for developing quality products for scientific and business applications.
- Adapt to emerging information and communication technologies (ICT) to Innovate ideas and solutions for the existing/novel problems.

Registration of Professional Elective Courses from Verticals:

A student can choose all the Professional Elective Courses either from one of the verticals or a combination of courses from all verticals in a semester. However, students irrespective of enrolling for additional courses for B.E. / B. Tech. (Hons.) are not permitted to choose more than one course from a row. Students are permitted to enroll more than one elective course from the same vertical in a semester. In the subsequent semesters students are permitted to enroll one more course in a row, provided if he/she has cleared the earlier course of the same row.
